

*How to send EtherCore coins from EtherCore Web Wallet

1. Select Send Ether & Tokens from tab, either choose Keystore / JSON File or Private Key from the list, and then paste your private key and click unlock

The screenshot shows the EtherCoreWebWallet interface. At the top, there's a navigation bar with the EtherCore logo, 'EtherCoreWallet', and a dropdown for 'Gas Price: 0 Gwei'. Below this is a menu with 'New Wallet', 'Send Ether & Tokens' (selected), 'Send Offline', 'Contracts', 'Check TX Status', 'View Wallet Info', and 'Help'. The main content area is titled 'Send Ether & Tokens'. It has two columns. The left column, 'How would you like to access your wallet?', lists options: 'View w/ Address Only', 'MetaMask / Mist', 'Ledger Wallet', 'TREZOR', 'Keystore / JSON File', 'Mnemonic Phrase', and 'Private Key' (which is selected and circled in red). Below this list is the text '1. Select Private Key'. The right column, 'Paste Your Private Key', has a green checkmark and text: 'This is a recommended way to access your wallet. Always backup your private keys and make sure they are not compromised to anyone. Not your keys, not your coins. Alternatively, please consider: • MetaMask or A Hardware Wallet or Running MEW Offline & Locally • Learning How to Protect Yourself and Your Funds'. Below this is a warning: 'Please double-check the URL & SSL cert. It should say <https://wallet.ethercore.io> in your URL bar.' Then, a red circle highlights the text '2. Paste your private key here' above a text input field containing a long hexadecimal string: '3b53b914e102d4a20c76c1674bddd9476cff3558570c3ca5e24c3e04dc8fab'. Below the input field is a blue button labeled 'Unlock', which is circled in red. To the right of the button is the text '3. Press Unlock button'.

2. Enter the necessary information to make a transaction
